

Group assignments 2ID90

Erik de Vink, Huub van de Wetering

Q3, 2017-2018

General rules for the group assignments

- Assignments are done in groups of two students: not more, not less.
- Per assignment these groups may differ.
- The assignment description and resources for the assignments will be available in Canvas.
- For each assignment a report of maximal 8 pages is required. This report should contain at least the following:
 - algorithms in pseudo code + explanation.
 - results + explanation.
 - references to used additional resources.
 - a statement of the contributions of each individual group member.
 - a manual on how to reproduce the results.
- A report template will be supplied.
- A Netbeans project should be handed in with which all the results may be reproduced. The source files need to be commented such that a human reader may quickly understand what is done and why.
- You are advised to use NetBeans 8.0 or higher and you might need JDK 8 or higher.
